PRESERVED MEADOW

FORMATS:
PRESERVED MEADOW sold per m2: 115x75cms and 75x75cms

BASE:
FOREX 3mms thick.

WEIGHT:
Approx. 20/23 Kgs per m2 (depending on how much humidity it absorbs).

THICKNESS:
Approx. 5/7 cms (the exact size of greenery is hard to tell).

POSITIONING:
Can only be placed indoors

GROWTH AND PLUCKING:
It is essential to respect Nature's course and that is why we pluck the grass and greenery we use in our creations only in areas where there is a regular natural production cycle enabling the plants to soon grow again.

PACKAGING:
Recyclable cardboard boxes and crates.

PRODUCTS:
Stabilizing techniques make use of 100% natural glycerine to help preserve plants.

COLOUR SHADES:
Acid Green colour, (typical of lawns in the month of May), Natural Forest Green or Winter Green.

WARNING AND PRECAUTIONS
Do not expose to direct sunlight; do not place or position next to heaters or floor-heating elements; do not water, spray or use any water to clean it with; do not store in a place with more than a maximum humidity rate of 70 %; do not worry if in time you will notice a little difference in colour, it is completely normal that it fades slightly; do not worry if at the beginning, whilst placing it, you will notice a slight scent, this is also a typical characteristic of 100% natural greenery which tends to smell just as it does when growing freely in Nature.

It is advisable to lay the lawn and place it in the same direction in which the grass blades grow in. This will guarantee an optimal colour reflection during the whole day, from dawn to dusk. It is advisable to position both ends of the formats as close to each other as possible, making the gap between the two parts minimal and less visible , in this way it will seem as if it were a just one single piece of natural turf. Straight after having positioned it, it will need some time to even out and adapt its shape, after having been stored in boxes (especially if in cold weather conditions). It helps if the grass blades alongside the adjacent formats are accurately combed with the help of appropriate gardening tools such as soft brushes which will enable the blades to straighten back up. If necessary, do this repeatedly for the first couple of days after having positioned it.

CLEANING AND MAINTENANCE
This preserved green wall panel frame requires no maintenance at all. It is advisable to dust it occasionally using a soft paint brush or pass the vacuum cleaner with soft brush accessories at a very low speed so as to regularly remove the specks of dust lying on top.
